

## **Paraxip Technologies Unveils Version 2.2 of its Open Media Gateway Software**

*Enhanced SIP Trunking Interoperability and Management of the  
Paraxip Gateway Software Target OEMs and Managed Service Providers  
in the Contact Center and Unified Communications Markets*

**LONDON, United Kingdom, June 4, 2007** – Today at the Genesys G-Force User Conference in London UK, Paraxip Technologies announced the availability of a new release of its Paraxip Gateway product delivering further innovations to address the seamless connectivity of SIP platforms and applications to legacy telephony networks. The Paraxip Gateway is a unique software solution based on standard, general purpose computing platforms. The software product provides unique benefits such as the capability to SIP-enable legacy installation and reducing the barrier of entry related to VoIP transitions; the most complete call progress analysis capabilities in a media gateway yielding the best ROI for outbound dialing voice applications; the widest coverage of call transfer scenarios; Open Protocol Translation feature providing optimum flexibility with interoperability issues associated with hybrid deployments; and more.

Attendees of the conference will have the opportunity to discuss products and services as Paraxip is showcasing inside the Partner Pavilion. G-Force London takes place at the Hilton London Metropole from June 4-6, 2007.

The release 2.2 of the product introduces multiple enhancements including such as improved SIP Trunking Support and Interoperability, Improved Management Web Server Management and new Telecom H/W driver support for Dialogic SR 6.0.

“This release further extends the interoperability and manageability of our industry-leading SIP gateway software product” said Serge Forest, President and CEO at Paraxip Technologies. “Not only the Paraxip Gateway is the ultimate OEM software solution for SIP applications but these new features pave the way for our next generation product line to address direct IP-IP interconnectivity issues at the edge of the IP enabled enterprise”.

Release 2.2 will be generally available on June 15, 2007.

## **About Paraxip Technologies**

Paraxip Technologies offers software products enabling IP telephony platforms and applications to seamlessly connect to heterogeneous network elements. Paraxip's products are designed from the ground up to offer IP telephony and legacy applications with un-paralleled transparency to legacy networks and equipment, enabling seamless operations in hybrid environments, where traditional and IP telephony equipment and applications are mixed.

Working with world-class industry partners, Paraxip brings to market innovative connectivity solutions in a flexible, building block approach. Paraxip's products are optimized for Interactive Voice Response, Call Center and Unified Communications applications. For more information, please visit <http://www.paraxip.com>
